A car has had to be dragged from flood water in Albrighton.

Newport Road was closed to cars this morning after rainfall caused a dip in the road under a bridge to flood.

PCSO Jacqui Fletcher said: "We closed the road this morning, earlier a car went through and broke down. If it stops raining hopefully the flood will be gone by later today, but if it carries on it'll keep flooding.

"People look at it and think it doesn't look that deep but the road dips and you can't see how deep it is.

POSTSCRIPT:

When RAF Cosford was opened, this was the only road from Albrighton to RAF Cosford, and with Equipment unloaded at Albrighton Railway Station the trucks ferrying all this to Cosford could

Not get clearance under the Bridge, that is until local Contractors (McAlpine, Wolverhampton) were called in to lower the road under the Bridge: the legacy of all this is when heavy rain is in charge the road floods!

Someone calculated that 5 million Boy Entrant footsteps went under this bridge, either in uniform or the regulation civilian dress, from May 1950 until July 1965.....
